## Need Help Compiling Data

Posted by carly23420 - 2008/02/23 22:52

---

Hello,

My apologies if this is a stupid question - or one that's already been answered - but I've been searching for answers to no avail. I'm trying to export my site content from one site to another (I'm using Joomla 1.0.12 and Export Content 1.7.0) and I can't get it to work. It acts as if it's compiling the data and then it says:

"You may now download your data via the download icon."

That'd be all fine and good, except... there is no "download icon" that shows up. I've reviewed the Export Content screenshots and know what I'm looking for, but it simply doesn't show. All I have are icons for "Compile for 1.0," "Compile for 1.5" and "Remove All"; when I select a category or categories and select "Compile 1.0" it acts as if it's doing it, refreshes, and gives me the above message (but without a download icon).

Help?!?

Thanks! :)

It sounds like there /administrator/components/com\_export\_content/zip/..  
and or /administrator/components/com\_export\_content/new\_version/..  
need to be made writable 777
