## how to uninstall export content completly

Posted by fwo - 2008/04/12 08:39

---

Hi,  
i 've installed version 1.6 for my joomla 1.0.12 (my mistake, should install 1.7)  
then i try to uninstall 1.6...

- uninstall through the backend (uninstall component)
- delete the tables via phpmyadmin
- delete components/com\_export via ftp

try to install 1.7 and got  
Restricted Access

may there is something from 1.6 still there??

How can i uninstall completely?

Version 1.6 should uninstall via the component manager as you would with any other component.

But if you have manually removed some parts then you will have to remove everything manually

Remove everything in red:

Go to: /components/com\_export\_content/..

Go to: /administrator/components/com\_export\_content/..

And in PhpAdmin remove(drop) export\_sections, export\_categories and export\_content tables.

After that you should be able to install version 1.7.0 :)
